

WELCOME TO MATRIX

Maritime Trading Information Platform

The extendable and integrated workflow based platform for the
'Information – Agile' business.

The Matrix Platform provides businesses with the capability to deploy multiple workflow applications which work seamlessly as an integrated suite of software tools, making businesses 'Information Agile'.

In common with ERP systems, Matrix uses a **common data model** – enabling easy integration with other modules and IT systems both now and in the future. The extendable platform approach enhances information agility, reduces future software extension costs as well as reducing annual software maintenance and operating costs.

A Singular Workspace for Multiple Applications

Users access ALL the intelligent tools and applications they need from a single desktop environment

The screenshot displays the Matrix software interface, which is a multi-pane workspace. On the left, there is a navigation pane with icons for Messages, Files, Faxes, Maria, Tankers View, Search Results, My Outgoing, and Positions. The main workspace is divided into several panes:

- Messages:** A list of messages with columns for Dir, Msg ID, Creation Date Time, Author, Subject, and Message Type. Below the list is a detailed view of a message, including the sender (Constantin Kavadias), recipient (Constantin Kavadias), and subject (TANKER VOYAGE CP).
- Addressbook:** A list of contacts with columns for Name, Title, and other details.
- Vessel Detail:** A table showing vessel information, including Vessel Name, LRIMO, DWT, Built Date, No of Ho, and Flag.

Dir	Msg ID	Creation Date Time	Author	Subject	Message Type
I	51744	08/11/1999 22:12:16		Manuals Co-Dir, Comms, Position List, SNP	Internet Email
I	52632	29/11/1999 20:25:51		Dry Position List Conversion	Internet Em
I	83682	03/08/2001 17:12:51		Vessels Position	Fax
I	83684	03/08/2001 17:28:51		ReVessels Position	Fax
I	99424	30/08/2002 14:56:31		Positions	Internet Em
I	133689	29/01/2004 11:50:51		Disposition notification	Internet Em
I	133690	29/01/2004 13:41:51		TEAR SHEET TANKER POSITION LIST	Internet Em

Vessel Name	LRIMO	DWT	Built Date	No of Ho	Flag

Data Accessibility, Reliability and Protection.

Reliability 24 x7: Matrix can be configured as a basic single server system or an advanced critical system with full clustering, failover and load balancing.

Accessibility: Users can access via Desktop, PDA, and Internet.

Scalability: Matrix is a scalable solution designed to meet the needs of 2 to 500+ users across multiple offices in distant geographic locations.

Storage: Unlimited mainstream SQL storage. All Matrix file handling is 64bit. Data storage is isolated from the user desktop, with a zero workstation footprint, to increase system reliability and robustness.

Security: Matrix employs comprehensive data encryption and a consistent security and access system which can be tailored to meet the needs of basic individuals or complex multi-workgroup controls – keeping your data safe.

Matrix Communicate.

A powerful collaborative messaging module enabling users to send, receive and manage high volumes of messages.

Seamless integration with advanced maritime software – switch between address book, messaging and vessel information with one simple click.

Fast and powerful search engine.

Full intelligent message filtering serves the data you need directly up to you.

Captures messages sent from **Blackberry or Windows Mobile.**

Fully integrated with **MSN and Yahoo** Instant Messaging.

Matrix Shipbroker.

Retrieve and display accurate, detailed vessel information and commercial data at the touch of a button.

Fully customizable commodity and business templates.

Immediate access - deep integration allows limitless switching between vessel and commodity information, address book and messaging with simple mouse or keyboard operation.

Vessel and cargo world map display enables user to see full requirement and vessel ratios to assist principals in commercial decision-making.

Matrix Address Book.

Extensive and fully scalable

Exportable into other mobile devices

Microsoft.NET connectivity gives you access to the address book directly from any Microsoft Office application or other in-house systems.

Integration with the web.

Group Calendar.
